

Assembly

All Comfy goat brushes are ready to use upon delivery and are very easily assembled in any barn. Due to the well thought-out wall plate with pre-drilled holes, the goat brushes can be mounted on any post. In addition, the goat brushes can also be attached to a wall by using the optional mounting bracket.

Safety

Comfy's goat brushes are all equipped with an overload safety device. This will stop the brush if the resistance is too high or in case of excessive heat. This guarantees the safety of you, your animal and your environment.

Comfy Goat brushes

Enhance the well-being of your goats!

About us

We believe that optimal comfort for animals in livestock farming contributes to the improvement of animal welfare but also to the quality and production in livestock farming. With our many years of experience, we are able to transform any animal welfare issue into innovative and technological solutions. All this with just one goal: better animal welfare!

Comfy

Innovations for
animal welfare

Increase their well-being with our special range of Comfy Goat brushes.

Comfy has extensive experience in the design of various cow brushes. We've combined this experience and our knowledge of the sector to develop a special goat brush. The robust design takes into account the environment in which the brush has to work. In addition, we have implemented many features aimed at maximising animal welfare, safety and, of course, energy consumption.

COSY GOAT GOAT BRUSH

The Cosy Goat goat brush from Comfy is a robustly designed brush which is characterised by 3 well-considered innovations. One of them is the simple height adjustment for use in deep litter situations, without the need for any tools. This height adjustment provides a difference in height of 80 centimetres in several steps.

In addition, the goat brush uses a motion detector to activate the brush. In this way, the brush starts before the animal reaches the brush, which prevents it from nibbling on the brush. This is the ultimate solution for a durable brush for goats.

The brush itself is made of nylon bristles which provide a much longer operating life. This ensures an optimal brushing action and because the nylon bristles don't get bent, the brush will continue to discharge dirt. The brush will therefore retain its brushing action for a longer time and will also remain hygienic because dirt accumulation is prevented.

One brush is sufficient for about 50 to 60 goats and requires little or no maintenance.

By using height adjustment, the brush can be placed in every stall and with every animal group. The brush can grow with the animal group and/or with the rising surface in the case of a deep litter stall.

Lastly, we use nylon bristles because they retain their shape for longer. This maintains a good brushing action and allows the dirt to be more easily discharged from the brush roller.

> The brush is available in green, black, red and blue.

Specially developed for your animals.

Each Comfy brush design incorporates some well considered innovations. We believe it's important that the brush starts up quickly and easily. For this purpose, we have employed a motion sensor which makes the brush rotate before the animal reaches it. This prevents nibbling at the brush.

Brush frame dimensions	26.4 x 74 x 152 mm
Brush diameter	At the largest point 270 mm
Brush length	470 mm
Power	220V
Power usage per hour	0.09 Kw
Weight	32.5 kg
Brush rotation speed	24 rpm
Movement	Rocking
Direction of rotation	Clockwise
